## Essential Oil a benign and efficient agriculture

Casia is a range of natural solutions made from hydrosols of aromatic and medicinal plants cultivated and distilled in the Drôme Region, at the heart of the Baronnies Provençales Regional Natural Park.

The Products developed are Natural Substance for Biostimulant Use (NSBU) classified under the category of Low-Risk Natural Preparations They may be used in Organic Farming

The solutions improve plant health, optimize nutrient availability in the rhizosphere and enhance crop resistance to environmental stress.

By integrating our natural biostimulants into their farming practices, producers can not only increase their crop yields but also contribute to environmental preservation by reducing the use of synthetic chemical products.

The various solutions have been developed taking into account the benefits of each of the essential oils used in their composition to address the specific needs of the crop to be protected and promoted (viticulture, olive growing, arboriculture...)

At **Domaine des Arômes Français**, we take pride in contributing to the development of a more sustainable and environmentally friendly agriculture.

By choosing Casia, you are opting for beginner agricultural practices where performance can go hand in hand with respect for nature.

## DOMAINE DES ARÔMES FRANÇAIS WHO ARE WE ?

The domaine des arômes français produces perfume, aromatic and medicinal plants. Our farm is located in the Drôme Provençale covering 210 Ha, 123 of which are dedicated to organic farming.

Our company also has a network of over 60 producers across France covering an area of 320 Ha

Our distillery, located in the heart of the Baronnies-Provençales Regional Natural Park processes all our plants into pure and natural essential oils and hydrosols.

Our logistic warehouse is located in Saint Sorlin de Vienne, Isère, within the Rhône Valley Corridor.

## Corvid Repellent

Effectively repels corvids and  
stimulates the natural  
processes of plants

Strongly irritating to Corvids

Easy application with a cement mixer  
above 16°C

Efficient up to the 2-leaf stage

Natural and effective protection of seedlings  
without affecting germination

Biostimulant effects that help ensure your  
yields

Sowing the treated seed within 48 hours is  
imperative

# CALORIA

The best anti-freeze solution

Stimulates the natural  
processes of plants enhance  
their resistance to abiotic  
stress

Effective against white and black frost  
down to -2°C

Foliar application-effective 72 hours

Effective at all stages of the crop

Enhance resistance to the activity of the  
ice-nucleating bacterium *Pseudomonas*  
*Syringae* through the action of phytosterols

Supports the maintenance of cellular  
circulation during frost events

Increases resistance to physiological fruit  
drop further to a frost event

# EBUGA

## Pest Repellent

Stimulates the natural  
processes of plants to  
combat various pests

Réduction in TFI

Application with a spraying device

Effective at all stages of the crop

Specifically enhances resistance to various  
pests (weevils, flea beetles, pollen beetle,  
etc..) through the action of phytosterols

No impact on environment nor on human health

## Fly repellent

Stimulates the natural  
processes of plants against  
olive flies, cherry flies and  
other pests

Attracts natural predators of flies through the action of phytosterols

Application with a spraying device

Effective at all stages of the crop

Biostimulant effect that helps secure your yields

No impact on environment nor on human health

## Mildew and monilia

Stimulates the natural  
processes of the plants to  
combat mildew and monilia

Reduction in the use of sulfur

Application with a spraying device

Effective at all stages of the crop

Specifically enhances resistance to mildew and Monilia through the action of phytosterols in vineyards and orchards

No impact on environment nor on human health

Contact product
